Instructions for installing firmware stock: Click here for mediatech (MTK) devices. Spread tram (SPD) devices here. Qualcomm (QFL) devices here. Hello Everbody. I'm a long-term follower of Crackberry, but I'm not really a contributor. I need some help for my old man Q10. I installed the latest autoloader downloaded via Crackberry instead of the official OS installed on my Q10. The problem is that you are inging up with the os version installed. The OS version is 10.3.3.3216. Is there a way to download the latest official OS version? My browser continues to crash, so the camera is not working from time to time, the music player does not recognize media files, so I can restart the device and use it successfully for a while and I have the same problem again. BlackBerry Link can't help me in this regard. No update warnings are displayed. The Internet says there is no more firmware support via BlackBerry Link. 03-12-19 02:53 PM 0 like 0 The d2f4b738768a28c3749f&amp;p=13360930&viewfull=1#post13360930 issue is causing problems with the installed OS version. The OS version is 10.3.3.3216. You are using the latest OS version. Your only option is to wipe/reload the OS and hope it is good after reloading. Honestly, none of the issues you're describing are really out of the standard at this point. Even if you haven't really experienced them, they are all the problems that are pretty present on the BlackBerry 10 from the jump. The exception is the browser, which at this point is only old and old. Consider trying a different browser in the future. a lot of people haveIn recent BB10, I use Android browsers, such as Kiwi browser and BEOL browser. 03-12-19 03:30 PM 0 1ce3d2f4b738768a28c3749f&amp;p=13360933&viewfull=1#post13360933 You have the latest OS version. Your only option is to wipe/reload the OS and hope it is good after reloading. Honestly, none of the issues you're describing are really out of the standard at this point. Even if you haven't really experienced them, they are all the problems that are pretty present on the BlackBerry 10 from the jump. Thanks for the reply. I reloaded, but it's the same. I have the mentioned version of the autoloader. Just click on it and do the installation. I had no problems at all when the official OS was installed, so I thought that if I could go back to the latest official OS, it would solve the problem. BlackBerry Link doesn't offer that support, so is there a chance to go back to the official version? Today, however, it is no longer available. For the support. +81-3-12-19 03:41 PM like 0 for your reply. I reloaded, but it's the same. I have the mentioned version of the autoloader. Just click on it and do the installation. I had no problems at all when the official OS was installed, so I thought that if I could go back to the latest official OS, it would solve the problem. BlackBerry Link doesn't offer that support, so is there a chance to go back to the official version? Today, however, it is no longer available. For the support. I can't remember how far back to the OS version you can go, I believe it's the only 1-2 version and the autoloader may not be taken anymore. Perhaps @conite, or @TrumpetTiger be able to give you a good answer as to how far you can go. 03-12-19 03:45 PM Thank you for replying 611ce3d2f4b738768a28c3749f&amp;p=13360937&viewfull=1#post13360937. I reloaded, but it's the same. I have the mentioned version of the autoloader. Just click on it and do the installation. BlackBerry Link doesn't offer that support, so is there a chance to go back to the official version? Today, however, it is no longer available. Thank youAs you understand, here's all bb10 autoloader: ERomDKaT!YXwe5p2bUlm\_4VW5VFTw official BlackBerry OS firmware. Due to security issues, installing the 10.3.3.xxxx version does not allow you to go back to 10.3.2.xxxx, but you can return to the previous version of 10.3.3.xxxx. I suggest you try again with 10.3.3.3216 from the link site above. If it doesn't work properly, you can try the previous version of 10.3.3. Another thing I should mention is to hold down the power button for about 10-15 seconds until the red LED flashes before you do anything else to give the Q10 a hard restart. This will restart the device. Q10 should be left for more than 15 minutes before checking the function. 03-12-19 03:52 PM 0 I can't remember how far back back to the OS version 611ce3d2f4b738768a28c3749f&amp;p=13360938&viewfull=1#post13360938, I believe it's the only 1-2 version and the autoloader may not be taken anymore. Perhaps @conite, or @TrumpetTiger be able to give you a good answer as to how far you can go. It seems painful to me. I'm not really into these things. I always had two choices. Autoloader or BlackBerry link. I tried a couple of lower versions of the autolader and as you said my device is just stuck blackberry screen. Then I went back to version .3216. Anyway thank you. 03-12-19 03:53 PM like 0 It feels pain for me. I'm not really into these things. I always had two choices. Autoloader or BlackBerry link. I tried a couple of lower versions of the autolader and as you said my device is just stuck blackberry screen. Then I went back to version .3216. Anyway thank you. @brookie229 the advice of the company and it is solid information and may help with a little patience. Do your best! 03-12-19 03:59 PM like 0 it feels pain for me. Do your best! 03-12-19 PM 03:59 like 0 Just as you understand, here's all bb10 autoloader: ERomDKaT!YXwe5p2bUlm\_4VW5VFTw is the official BlackBerry OS firmware. Due to security issues, installing the 10.3.3.xxxx version does not allow you to return to 10.3.2.xxxx, but you can go to the previous version.The 10.3.3.xxxx. I suggest you try again with 10.3.3.3216 from the link site above. If it doesn't work properly, you can try the previous version of 10.3.3. Another thing I should mention is to hold down the power button for about 10-15 seconds until the red LED flashes before you do anything else to give the Q10 a hard restart. This will restart the device. Q10 should be left for more than 15 minutes before checking the function. I didn't know I couldn't go back to any version of 10.3.2. I'm going to try the previous version. I always use hard reset tricks. The camera issue will be resolved, but after a while the problem will reappear. It's not really the main rear camera in question. The front camera sometimes shows a rainbow line. The main camera works perfectly. Browser crashes never occurred in 10.3.2. 03-12-19 04:00 PM 0 like I didn't know I couldn't go back to any version of 10.3.2. I'm going to try the previous version. I always use hard reset tricks. The camera issue will be resolved, but after a while the problem will reappear. It's not really the main rear camera in question. The front camera sometimes shows a rainbow line. The main camera works perfectly. Browser crashes never occurred in 10.3.2. The problem with the camera sounds like a hardware failure and the browser is what it is. More sites are crashing as a result of the old browser itself. 03-12-19 04:06 PM 0 like I didn't know I couldn't go back to any version of 10.3.2. I'm going to try the previous version. I always use hard reset tricks. The camera issue will be resolved, but after a while the problem will reappear. It's not really the main rear camera in question. The front camera sometimes shows a rainbow line. The main camera works perfectly. Browser crashes never occurred in 10.3.2. Hey faith, I'm a little surprised that these problems persist even after using the autoloader. If I might ask, where are you getting your autoloader from?03-19-19 02:37 PM 0 like 0 Yes the camera sounds like a hardware problem. The browser crashes. For me, the browser didn't work on many sites in 10.3.2, but 10.3.3 gave the browser a new life. But did it all happen two years ago? You can try downloading other versions of 10.3.3. However, your overall problem may be hardware-related. Did you run BBVE 03-19-19 03:06 PM like 0?
